

2014 STD/HIV Prevention & Policies in California Schools

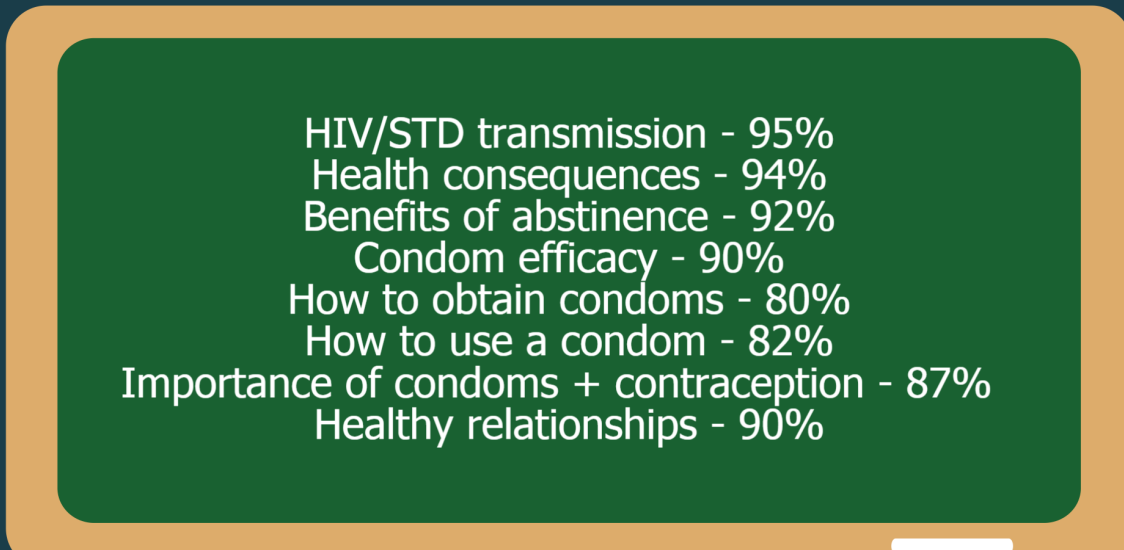

Results from the 2014 School Health Profiles Survey

The School Health Profiles Survey assesses school health policies and practices nationally and in California. The survey is completed by middle and high school principals and health education teachers from a representative sample of California public schools.

At least 80% of schools report they are teaching: ✓

BUT fewer schools report they are teaching students about all FDA approved birth control methods *

Pill
76%

Shot
74%

Patch
71%

IUD
71%

Implant
71%

Ring
70%

EC
69%

Middle Schools

68%

of schools report they are teaching students about HIV and STD transmission

57%
